

ADBulk Export is a tool that allows you to export Active Directory objects to CSV files or SSV files. The program comes as a command line tool and as a GUI. You can use either option. The command line option is ideal for dumping objects from large AD trees. The GUI option is for situations when you wish to make some changes to the exported file before exporting it again. You can also choose to export information from the non-Active Directory directories, or a combination of both. It can be used with Microsoft Active Directory (2000 and 2003) and Exchange (2000 and 2003).

ADBulk Export Requirements: Microsoft Windows 2000 and/or later, or 2000/2003 version of Windows Server, or Linux Ability to run commands as a user with an administrative account Administrator must be able to install a command line program on your system ADBulk Export can be installed as a standalone application or as a Windows service

ADBulk Export Features: Able to export as many users, contacts, groups and computers as you require Very simple to use GUI (either via command line or Windows Explorer) Command line interface is ideal for dumping objects from large AD trees Command line export produces CSV (Excel etc) formatted files Export a large list of attributes Export Exchange 2000,2003 information Easy to use GUI Export a single object (e.g. single user) or a list of objects (e.g. all users) Possibility to choose which objects to export (from which OU) Export of attributes that you don't want to export can be disabled in the GUI Export of objects can be forced with the "-force" switch (can be very useful when you have large AD trees) Leads to a fast, reliable AD export process

ADBulk Export Limitations: All users, contacts, groups and computers must be first imported using ADBulk Import before exporting File is saved with the extension.cbt (for command line use) or.csv (for GUI use) The application can be run as a Windows Service. If you run the GUI in Windows Explorer, the file exported will not be an actual.csv file

Invokes the macro Has no limit on the number of attributes Adds macro arguments before invoking the macro Triggers Active X Security warning Has no ability to determine if the macro has been run before Export only supports LDAP schema changes Defaults to Active Directory schema change

Examples: Add MACRO to all OU's of specified domain (adboukexport /d:domain.com /users) Export all groups and member of group "group1" Export all users and member of group "group1" and "group2" Export all contacts and users in the Active Directory domain Export all groups and contacts and members of each Export all members of a group in a specific OU Export all users in a specific OU and their contacts

ADBulk Export extracts as much or as little information as you require from Active Directory relating to your Users, Contacts, Groups and Computer objects. ADBulk Export is amazingly simple to use yet powerful program that allows you to extract as much or as little information as you require from Active Directory relating to your Users, Contacts, Groups and Computer objects. All available attributes (including Exchange 2003) in your Active Directory Schema can be exported to CSV or SSV formats (both open easily with Microsoft Excel). Ideal for Active Directory migration or backup when used in conjunction with AD Bulk Users and AD Bulk Contacts. Works with Microsoft Active Directory (2000 and 2003) and Exchange (2000 and 2003). Here are some key features of "AD Bulk Export":

- ☑ Ideal for Active Directory Migration
- ☑ Ideal for Active Directory Backup
- ☑ Ideal for data analysis
- ☑ Exports easily to CSV (Excel etc)
- ☑ Export a large list of attributes
- ☑ Export Exchange 2000,2003 information
- ☑ Easy to use GUI
- ☑ Command Line Operation (Optional)

AD Bulk Export has the following command line arguments: /users-Export users. /contacts-Export contacts. /computers-Export computers. /groups-Export groups. /groupContents-Export groups and contents. /file:export.csv-Destination export file. /leaveOpen-Leaves the interface open. /path:CN=users,DC=Domain,DC=Com-Active Directory OU containing objects. /wait-Waits for the export to complete before returning to the command prompt

a new trial. The case will be remanded for the taking of evidence and the making of findings in accordance with the views expressed in this opinion. Reversed and remanded. NOTES [1] 18-24-12. A. It shall be unlawful for any person to play, gamble or allow any one to play, gamble or participate in or in connection with any game or gambling device in or upon any premises within this state where gambling devices are kept or are used. "Gambling device." A contrivance or machine for gambling, or one that is a device of such a nature as would have the effect of assisting the player in the understanding of the manner and method of playing the game or in preventing him from having a fair and impartial play therein

Migration ? Ideal for Active Directory Backup ? Ideal for data analysis ? Exports easily to CSV (Excel etc) ? Export a large list of attributes ? Export Exchange 2000,2003 information ? Easy to use GUI ? Command Line Operation (Optional) AD Bulk Export has the following command line arguments: /users-Export users. /contacts-Export contacts. /computers-Export computers. /groups-Export groups. /groupContents-Export groups and contents. /file:export.csv-Destination export file. /leaveOpen-Leaves the interface open. /path:CN=users,DC=Domain,DC=Com-Active Directory OU containing objects. /wait-Waits for the export to complete before returning to the command prompt Limitations: ? 15 days trial

Get Migration Ready is a tool that will analyze your AD for technical considerations prior to moving or migrating to a new Active Directory environment. It's purpose is to help you identify any technical requirements that need to be satisfied prior to moving or migrating to a new Active Directory environment. By using this tool, it may allow you to minimize downtime. Get Migration Ready is compatible with the following software versions: Microsoft AD Microsoft Exchange Microsoft Windows 2003 Server (32 or 64 bit) Here are the tools supported and how they can assist: Get Migration Ready identifies objects that must be converted from one database to another using NTFS replication. The script will identify the objects that should be converted. The script will analyze the Schema, FSMO roles, Computer objects, Attribute objects, Global catalog and the OU database to ensure it can perform the migration. Get Migration Ready then provides an analysis of the schema structure of the current environment to check for any incompatibilities. Get Migration Ready then checks the replication settings. Get Migration Ready then checks the relationship between database objects. Get Migration Ready then runs checks on the following technical issues: Registry, file share and user profiles Exchange Mailbox recovery

Hard Drive: At least 2 GB RAM Graphics Card: Nvidia GeForce 7900GS or better
DVD drive or USB drive Post your feedback Pro_Black_Burn is one of the very few
burning tools that allow you to not only burn data DVDs to blank DVD-R discs, but
also copy data to blank DVD-RW discs. It's not only capable of burning DVD-R discs,
but also copying and formatting DVD-RW discs. It's pretty good, and you can give it a
try for free. Read also:
