AutoCAD Activation Code's DXF format, which is a machine-readable ASCII file format, is the standard file format for exchanging drawings among CAD programs. The DXF file format is a text-based format that describes two-dimensional (2D) drawings in general. It supports blocks that may be an image, block label, block comment, drawing title, drawing description, and a block property block, which are similar to a field on a drawing. The DXF file format also supports attributes like field style, font, properties, dimension class, textbox style, and box style. The DXF file format includes internal data for drawing information and line/block drawings.
