What's new:

The Land of Elden is the realm of the Elden King, a far-off country stretching out across the continent. Now, individuals from around the world have gathered here to fight for their future. It is a mythic place where the most powerful race has existed for centuries. However, the world that the current King has earned for himself has crossed the line. Corruption and decadence remain deep-rooted in the land, and a vicious cycle of violence and upheaval has ensued.

The drivegaing is the biggest problem i have had in getting the game to run. I have installed the GameLoop Multiplayer version which makes the game run at 1280x720 with a framerate of 75-85 which is more than fast enough for me but there is a problem. You cannot use Windows VR. I have tried to change the windowed mode to virtual after running in full screen, 3D, and windowed. The game runs but i get a black screen. This is really troubling me as I really want VR support.

I tried to revert back to the iwlwifi drivers in the default lubuntu repository that for some reason install the 450 and 500 series of the iwlwifi driver since it is the version 12 out of date. I know that the drivers need to be updated so I downloaded the latest iwlwifi driver from
