.rar Last updated 14/10/2012 Background: This hack is being posted here not so much to publicize it so much as just share it on the AO3, but then again that doesn't hurt, does it? ? For me, the first part of this hack really made an impact on me, and I thought I'd share it in all its glory. I'd also just like to say thanks to Miamish for allowing me to use her song and I have to show my appreciation for having an amazing voice too. Finally, please note that this isn't my design. The design is by the ever amazing Hilda (who you might've already seen in one or two stories I've done, and the storyboard was drawn by Pox!Project!TheShow. No, wait! Sequentia! Never mind, what do you know they have a similar design. Anyways, that's not important.) Setting: Time: Mia-Sonata the Cataclysm 2115 The worst day of Mia's life had just passed. She had failed to save her homeworld (in this particular case, Earth didn't fit quite as often as it does in the normal timeline, but you get the idea). She had failed to save her sibling (her younger sister) from the Federation members that invaded and took her away. And worst of all... she had failed to save her life. The sole reason she was still alive was because her powers had failed her, leaving her defenceless against the invading convoy. The Bio-Synth had still managed to impregnate her with a powerful life-form, which caused her powers to fail completely. She laid face-down in a patch of soft snow, feeling the weight of everything she had lost pressing down on her. She felt hot tears on her cheek as she continued to cry, her only sounds the mournful whimpers of the exhausted young woman. Why did the Federation go to this much trouble? It would have been the work of a day to crush her, so why expend the time? Why did I have to die for MY family? This fight was MY fight. This war was supposed to be left to THEMSELVES! Mia didn't understand

Imperator: Rome is an RTS based on the Roman conquest of the Mediterranean in the 3rd-1st century BC and detailed under the factual, yet historically inexact, period of the Principate. The Ancients, or Romans, player assumes the role of general, leading their army to finally reunite the Mediterranean under Roman rule. To do so, they must conquer first Carthage in North Africa and then Egypt in Africa. Additionally, the player must deal with the decline and eventual fall of the Roman Republic, the rise of the Triumvirate, the Sicilian Wars and the lingering threat of internal dissension between the factions that make up the Republic. As the player helps stabilize the Republic, they build an empire in the Mediterranean that will serve as the foundation for the future. With the games storyline ranging from the military campaign to freeing the slaves to the development of the Roman State, Imperator: Rome delivers a detailed, yet highly engaging game experience, both for those familiar with the period and those looking to break free of it. Features: The most accurate depiction of the Roman Republic Enormous scope for map building - map size is 13x13 kilometers 3rd-1st century Mediterranean unit types 3rd-1st century skirmishers, archers, cavalry, chariots and other warfare units Light, medium and heavy armor for infantry and cavalry units Pigment for armor looks like bronze, wood, iron and leather Realistic combat mechanics - both player and AI are playable Single, multiplayer campaign Several different difficulty settings Detailed historical background The history of Ancient Rome is one of one of the most accurate in video games. The time period is depicted from the Battle of Pydna in 168 BC to the death of Julius Caesar in 44 BC. The Roman Republic has been preserved, and the player begins as an undisputed leader of Rome. Your success and survival, however, is not guaranteed. The player must face numerous political challenges, rival leaders, various factions, and rivals on the field of battle. There are ten unique factions that exist within the Roman Republic, each with its own traits and strengths and each with its own approach to leading Rome to victory. Imperator: Rome is a story of military conquest on an epic scale. The Roman provinces sprawl across a map 13x13 kilometers in size, allowing the player to play to their strengths, especially when building strategic chokepoints in the north or south of the map.
